

Wave Fax Manager

Fax without the fuss.

Automatically receive and route critical fax documents simply and securely with this value-add-on application for your Wave IP. Wave Fax Manager seamlessly integrates with any mail server to deliver important business communications directly to your email, whether you're in the office or on the move.

The timely delivery of today's business communications can be a deal breaker in the break-neck race to stay ahead of the competition. More important is the secure delivery of not only time-sensitive but often confidential fax documents such as medical prescriptions and reports; financial information; customer orders; and legally-binding contracts.

Integrated into Wave IP, Fax Manager makes receiving faxes an efficient, simple, affordable and secure process without the need for third-party fax gateways or devices. Fax Manager seamlessly integrates with any mail server via SMTP, allowing individual users to receive faxes directly through their email client.

Secure Document Delivery

Wave Fax Manager streamlines fax communications by automatically routing and delivering inbound faxes directly to a recipient's email. No more standing around the fax machine waiting for documents to come through, or piles of documents sitting in open areas where they can be picked up or viewed by anyone. Faxes received are saved in digital format as an email attachment as either a TIFF image or a Portable Document File (PDF), allowing users to view and access them using their PC or mobile device.

Lower Operational Costs

Wave Fax Manager also helps you reduce capital costs associated with the deployment of fax machines, multi-function printers, dedicated analog circuits, and related supplies such as paper and ink, as well as on-going service contracts.
